IBM SkillsBuild for University Engagements – AICTE 2026

Problem Statement No. 7 – AI Agent for Digital Financial Literacy

The Challenge – An AI Agent for Digital Financial Literacy, powered by RAG (Retrieval-Augmented Generation), helps users understand and navigate essential financial tools and practices.

• It retrieves reliable content on using UPI, avoiding online scams, understanding interest rates, budgeting, and personal finance management from government portals, banking websites, and educational platforms.
• With multilingual support, users from diverse backgrounds can interact in their preferred language and ask questions like "How do I send money via UPI?" or "What is a safe interest rate for a loan?"
• The agent ensures financial literacy is accessible, personalized, and culturally inclusive.
• This AI-driven assistant empowers users with knowledge, protects them from fraud, and builds confidence in digital finance.

Technology – Use of IBM Cloud Lite services / IBM Granite is mandatory.

Our solution: ArthSaathi

ArthSaathi is a Langflow agent powered by IBM Granite on IBM watsonx.ai. Trusted RBI / NPCI / I4C / government-scheme material is parsed with Docling and embedded with a Granite embedding model for retrieval. The agent answers in the user's language, calculates EMIs and budgets with a calculator tool, checks suspicious messages for scam red flags, and directs fraud victims to the 1930 helpline. A simple web front-end was built with IBM Bob.
